

Mini USB Plus

USB Duplicator Quick Start Guide

Version 1.0.00 All rights reserved ©2019

Product Overview

Operation Procedure

Plug in the power and turn on power switch to confirm that the blue power indicator is steady on.

1

Insert the flash drive with the data to be copied into the Source port. When the green light is on, the machine has detected it. When the green light flashes, it indicates that it starts working.

2

Insert the blank drive into the target ports. When the green light is on, the machine has detected it. When the green light flashes, it starts to copy automatically.

3

When the green light of the target ports is steady, indicating that the copying process has been completed, you can immediately unplug the copied flash drive and insert the next blank flash drive for copying, without waiting for all the flash drives to complete and then change to the next round.

4

※ The mini USB Plus is a fairly lightweight and portable USB duplicator. With unique unsynchronized plug-and-copy mode, you don't have to wait for all the flash drives to be copied, and any of them can be replaced with another one after copy, allowing you to complete the copy quickly and easily. In addition, the duplicator copies valid data section only, and does not need to copy the whole USB drive, which can greatly reduce your precious time.

※ Warning

1. **DO NOT** unplug USB from duplicator during the execution process. It may cause damage to the duplicator system and USB.

2. **DO NOT** plug in USB before the duplicator is powered on and boots up. Certain disqualified USB may cause problem to system boot up.
